

CELEBRATIONS and CONGRATULATIONS!

Moody International sincerely congratulates all the offices celebrating anniversaries, and wishes continued success for many years to come!

In 1948, Moody International opened its first international office located in Tokyo, Japan.

The Tokyo office was launched in order to service the Japanese trading industries and the vast piping manufacture in the line pipe industries. Since it began, the Moody Japan operations have grown to include engineering, inspection and expediting services for line pipe and general industrial facilities as well as for mechanical and electrical components and subassemblies.

In 2002, an additional office was opened in Osaka to serve the western areas of Japan and provide training facilities for ISO Certification and other training services.

Moody International's full service Japan offices are approaching Tier 1 status in the ISO Certification business. In the past five years, the Certification division has taken the lead over non-government supported Certification Bodies in ISO certifications.

Moody Japan's mission continues to be the provision of highly skilled and professional services which are focused on world projects and are always beneficial to Moody's clients and employees.

Moody International Korea was initially founded in August of 1978. Beginning in early 2000, Moody Korea has focused on intensive sales of worldwide services to local Korean customers such as SKEC, GS E&C, Daelim Industry, and Samsung Engineering. As a result of these sales efforts, tremendous improvement has been made in the awareness of Moody's services, name recognition and communication with local Korean business society and EPC firms.

As part of the Moody International Group, Moody Korea has been executing international contracts in Korea, as well as exporting a significant volume of work to overseas Moody offices, thus contributing to the company's overall sales growth year to year.

Through years of industrial construction project-related work, the local team of Moody Korea Project Coordinators and Technical Specialists possess extensive knowledge and experience with pressure vessels, heat exchangers, columns, structural steel, etc for a wide range of business sectors in oil & gas, upstream and downstream industries, as well as power generation.

Moody Argentina joined the Moody International Group in 1998 and is now the Group's second largest office in South America.

As well as vendor expediting services, the Moody operations in Argentina provide technical inspection services (TIS) such as OCTG inspection, pipe mill and coating inspection, fabricated equipment inspection, NDT and pipeline management certification. Some major clients who have benefited from Moody Argentina's services are Exxon, Aramco and Technip.

As part of the Moody International Group, Moody Argentina continues to work diligently to cover clients expectations with quality and efficiency. "Moody International de Argentina S.A." is truly proud of its operations and staff which have helped to make this office what it represents today.
